London Crime Prediction Dashboard

SARIMA-based forecasting of MPS borough-level crime, validated against real Mar–Jul 2026 data.

Forecast Error (Lowest)

Mean Error (32 boroughs)

Best Predicted Borough

3.48%

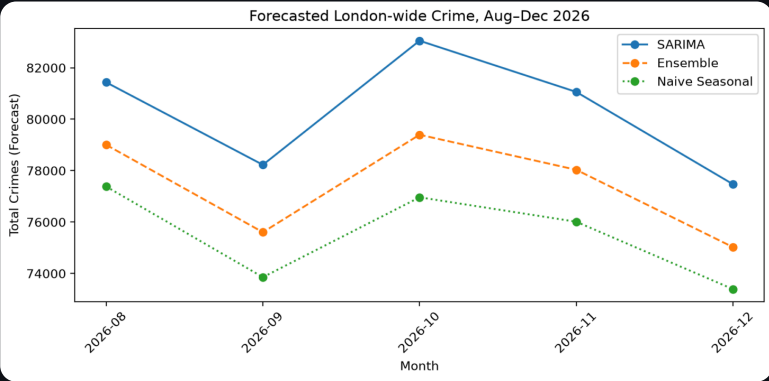

4.4%

Kensington

Best predicted borough error: 1.0%

London-wide Crime Trend & Forecast (Aug–Dec 2026)

Three forecasting methods shown side by side: SARIMA (used throughout this project), an Ensemble blend (40% SARIMA / 60% Naive Seasonal), and Naive Seasonal alone (same month, prior year).

SARIMA(1,1,0)(1,1,0,12) is the primary model used throughout this project. Ensemble and Naive Seasonal are shown as robustness comparisons — in July 2026 real-world validation, the Ensemble slightly outperformed both individual methods (0.35% error, vs 1.20% for SARIMA and 1.38% for Naive Seasonal). None of the three is presented as definitively correct for Aug–Dec, since no real outcome data exists yet for those months.
